THE ART OF PRESERVED NATURE®

for interiors

Care Instructions

Maintenance

- Low speed leaf blower is recommended for dusting every 8-12 months or as needed. Please ensure keeping the nozzle 2-3 feet away from the installation as strong airflow may cause damage the preserved plants and foliage.
- Feather duster is recommended for occasional dusting. Avoid spray dusting as it is too aggressive for preserved plants.
- Avoid spraying and washing with water and all liquids. Contact with such can cause premature color degradation.
- As the preserved plants and flower foliage are natural and non-toxic, they can be targeted by insects. Therefore fumigation of the display area in the sign of insect presence is advised.

Location

- For indoor use only.
- Display at normal room temperature (60-85°F).
- Avoid displaying in high humidity (>70%).
- Avoid displaying close to (2 feet) heat emitting lights.
- LED lights are recommended for illumination.
- Since UV light may cause color degradation, full or direct sun exposure requires UV Controlled Windows or Window Films.
